

For the treatment of attention-deficit/
hyperactivity disorder (ADHD) in adults...

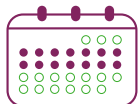

What are some
reasonable
expectations for treatment
with a nonstimulant?

When can I expect results?

Qelbree is a first-of-its-kind, once-a-day nonstimulant treatment approach for ADHD

- **Qelbree** is the first novel nonstimulant approved for adult ADHD in over 20 years!
- ADHD is with you every day and **Qelbree** is taken once a day, every day

Qelbree is proven to work in medical studies that were conducted over 6-8 weeks—showing significant reduction in ADHD symptom scores in 4 medical studies of more than 1400 people

- **Qelbree** reduced ADHD symptom scores as early as week 2 for some adults

Not everyone responds to medication the same way; your body may need time to adapt. It is important to share how you are feeling with your healthcare provider (HCP), so treatment can be adjusted if necessary.

IMPORTANT SAFETY INFORMATION

Qelbree may increase suicidal thoughts and actions, in children and adults with ADHD, especially within the first few months of treatment or when the dose is changed. Tell your doctor if you or your child have (or if there is a family history of) suicidal thoughts or actions before starting Qelbree. Monitor your or your child's moods, behaviors, thoughts, and feelings during treatment with Qelbree. Report any new or sudden changes in these symptoms right away.

Please see full Important Safety Information on page 4.

What should I know about safety?

Qelbree has been proven safe* in the adult medical study with manageable side effects when taken as directed

- 9% of participants taking **Qelbree** discontinued the medical study due to side effects vs 5% taking inactive treatment (placebo)
- **Qelbree** is unlikely to have negative interactions with stimulants like methylphenidate or amphetamine

*Important: Monitor for mood or behavior changes. Your HCP should also monitor for changes in blood pressure and heart rate

Qelbree is a nonstimulant, which means it is not a narcotic or a controlled medication

- There is no evidence of abuse

Take Qelbree every day. It may take some time for your HCP to optimize your dose. Be sure to share how you are feeling, including any side effects, so your treatment can be adjusted if necessary.

IMPORTANT SAFETY INFORMATION

The most common side effects of Qelbree in patients 6 to 17 years are sleepiness, not feeling hungry, feeling tired, nausea, vomiting, trouble sleeping, and irritability, and in adults, insomnia, headache, sleepiness, tiredness, nausea, decreased appetite, dry mouth, and constipation. These are not all the possible side effects of Qelbree.

Qelbree[®] ONCE-A-DAY
viloxazine
extended-release capsules
100 mg 150 mg 200 mg

Can I expect to find it at the pharmacy?

Qelbree is widely available in pharmacies

Patients that were prescribed **Qelbree** came from

- 65%** switched to **Qelbree** from a controlled substance or stimulant medication
- 35%** switched to **Qelbree** from another nonstimulant medication

Qelbree is backed by a robust savings and support program

- Commercially insured patients may pay as little as \$20 per prescription*

*Terms and conditions apply.

If you are having difficulty getting your ADHD prescription, ask your HCP if Qelbree is an appropriate treatment option. Your HCP may have samples of Qelbree or can request them from the manufacturer if it's decided a trial of Qelbree is an option for you.

IMPORTANT SAFETY INFORMATION

You should not take Qelbree if you or your child:

take a medicine for depression called a monoamine oxidase inhibitor (MAOI) or have stopped taking an MAOI in the past 14 days. Also, you or your child should avoid alosetron, duloxetine, ramelteon, tasimelteon, tizanidine, and theophylline.

Please see full Important Safety Information on page 4.

What else can I expect from treatment?

Qelbree is convenient

- **Qelbree** is a once-a-day treatment that offers full-day medication coverage
- **Qelbree** can be prescribed by your doctor via telehealth; there is no need for a new prescription each month to refill your medication

Qelbree may offer you consistency

- **Qelbree** is taken once a day—any time of day
- **Qelbree** offers rapid and extended-release, full-day medication coverage
- **Qelbree** is with you (and your ADHD symptoms) throughout your day

To hear from real patients about their experience on Qelbree visit **Qelbree.com**.

IMPORTANT SAFETY INFORMATION

Qelbree can increase blood pressure and heart rate. Your or your child's doctor will monitor these vital signs.

Qelbree[®] ONCE-A-DAY
viloxazine
extended-release capsules
100 mg 150 mg 200 mg

INDICATION

Qelbree is a prescription medicine used to treat ADHD in adults and children 6 years and older.

IMPORTANT SAFETY INFORMATION

Qelbree may increase suicidal thoughts and actions, in children and adults with ADHD, especially within the first few months of treatment or when the dose is changed. Tell your doctor if you or your child have (or if there is a family history of) suicidal thoughts or actions before starting Qelbree. Monitor your or your child's moods, behaviors, thoughts, and feelings during treatment with Qelbree. Report any new or sudden changes in these symptoms right away.

You should not take Qelbree if you or your child:

Take a medicine for depression called a monoamine oxidase inhibitor (MAOI) or have stopped taking an MAOI in the past 14 days. Also, you or your child should avoid alosetron, duloxetine, ramelteon, tasimelteon, tizanidine, and theophylline.

Qelbree can increase blood pressure and heart rate. Your or your child's doctor will monitor these vital signs.

Qelbree may cause manic episodes in patients with bipolar disorder. Tell your doctor if you or your child show any signs of mania.
